

1. Make sure the MySQL server is running

Answer:

2. Check whether the MySQL server is running. If it isn't, start it. When you're done, close the Startup/Shutdown window.

Answer:

Use MySQL Workbench to review the Accounts Payable (AP) database

- In the Navigator window, expand the node for the AP database so you can see all of the database objects it contains.**

- View the data for the Vendors and Invoices tables.**

Use MySQL Workbench to enter and run SQL statements

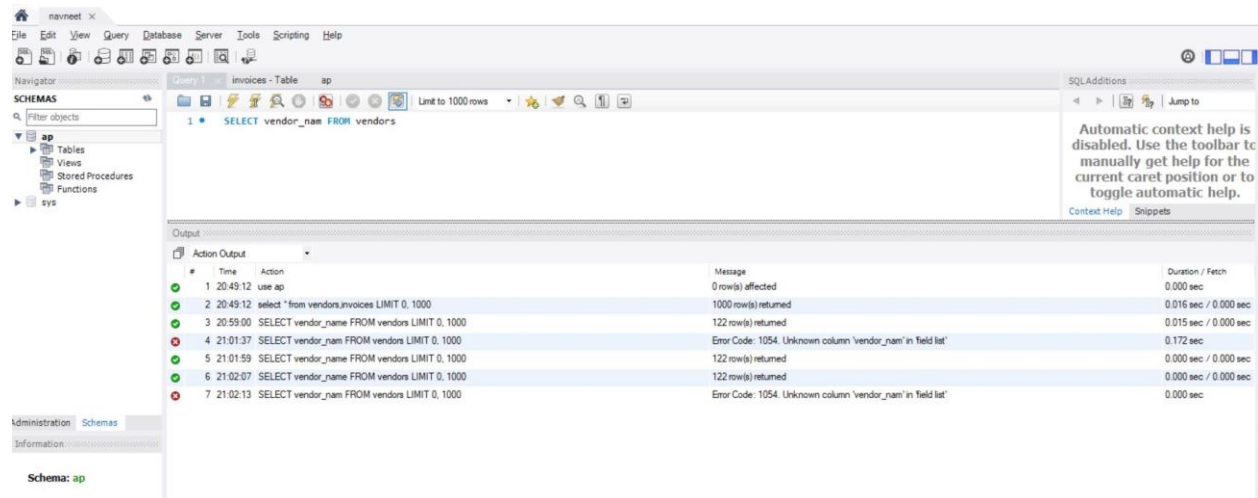

6) Double-click the AP database to select it. When you do that, MySQL Workbench should display the database in bold.

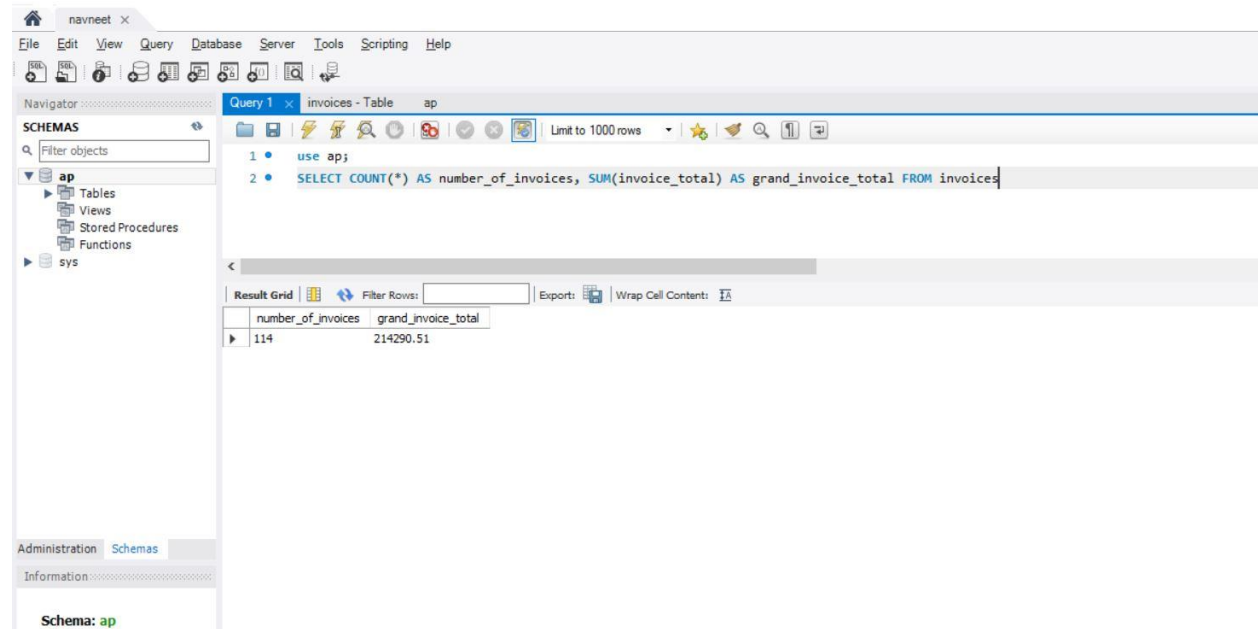

7) Open a SQL Editor tab. Then, enter and run this SQL statement: `SELECT vendor_name FROM vendors`

8) Delete the e at the end of vendor_name and run the statement again. Note the error number and the description of the error.

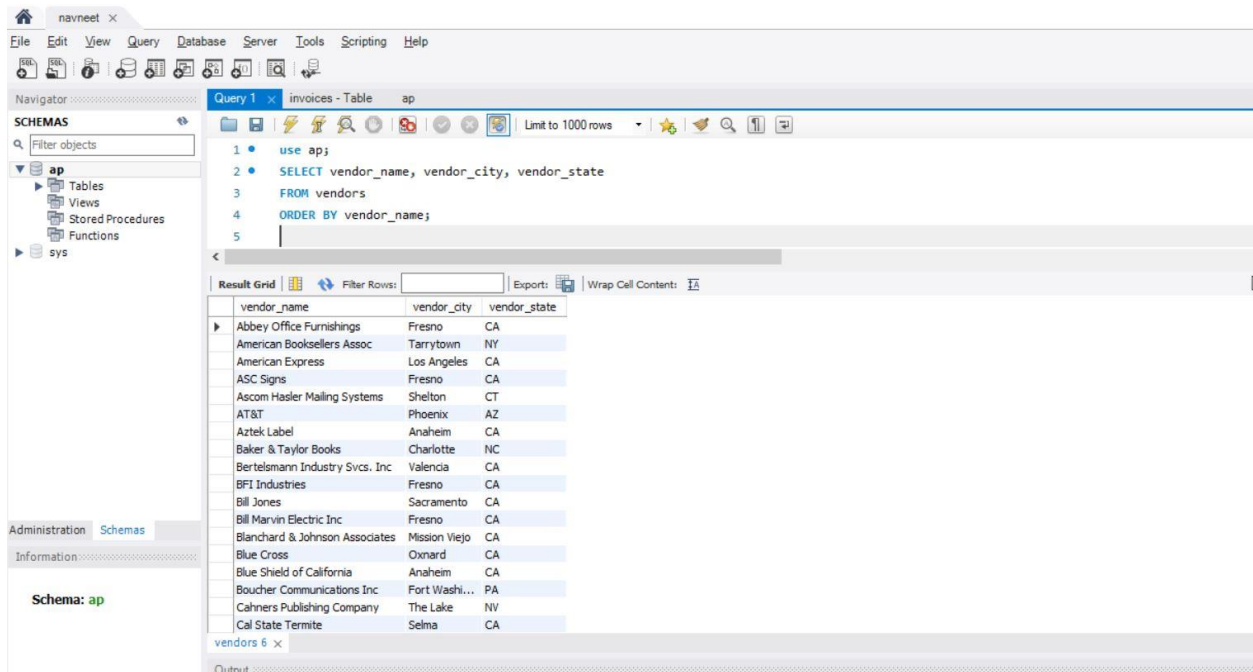

9) Open another SQL Editor tab. Then, enter and run this statement: `SELECT COUNT(*) AS number_of_invoices, SUM(invoice_total) AS grand_invoice_total FROM invoices`

Use MySQL Workbench to open and run scripts

10) Open the select_vendor_city_state script that's in the c:\murach\mysql\scripts\ch02 directory. Note that this script contains just one SQL statement. Then, run the statement.

Script: `SELECT vendor_name, vendor_city, vendor_state
FROM vendors
ORDER BY vendor_name;`

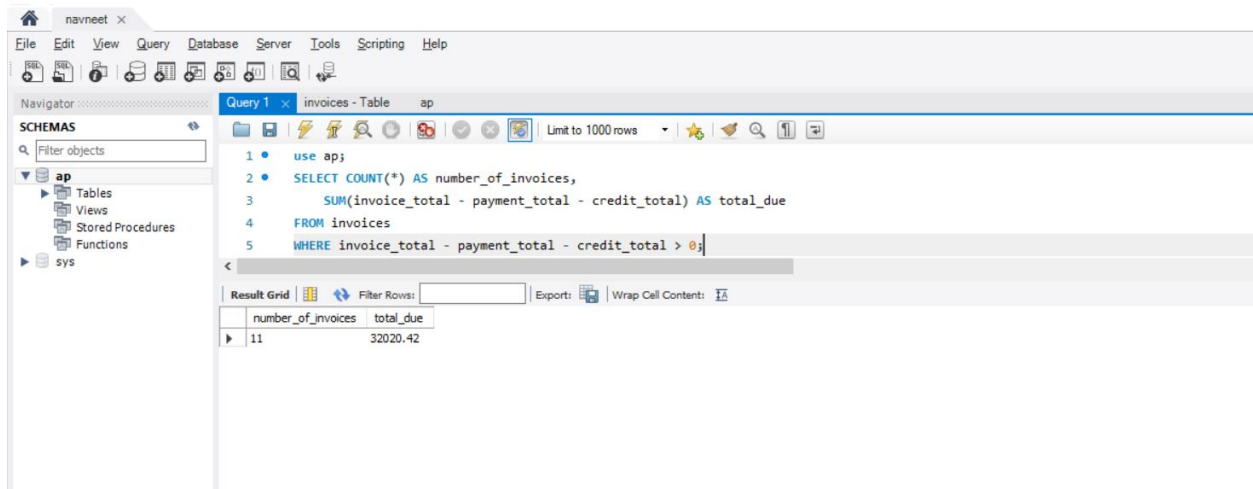

11) Open the select_vendor_total_due script that's in the ch02 directory. Note that this opens another SQL Editor tab.

```

Script: SELECT COUNT(*) AS number_of_invoices,
        SUM(invoice_total - payment_total - credit_total) AS total_due
FROM invoices
WHERE invoice_total - payment_total - credit_total > 0;

```

12) Open the select_vendor_information script that's in the ch02 directory. Notice that this script contains two SQL statements that end with semicolons (scroll down if you need to).

13) Press the Ctrl+Shift+Enter keys or click the Execute SQL Script button to run both of the statements in this script. Note that this displays the results in two Result grids. Make sure to view the results of both SELECT statements.

Script: SELECT vendor_name, vendor_city
FROM vendors
WHERE vendor_id = 34;

SELECT COUNT(*) AS number_of_invoices,
SUM(invoice_total - payment_total - credit_total) AS total_due
FROM invoices
WHERE vendor_id = 34;

Answer:
